**15. (continued)**

(a) Spring classes for babies are ending soon. An email needs to be sent to all parents to offer them a place in the Summer classes.

Design a query that could be used to generate a list of names and email addresses of parents with a child who attends a Spring class for babies. **4**

(b) A new class is going to be added for Autumn which will be run by Adam. This is added by executing the following SQL statement.

```
INSERT INTO Class (classID, leaderName, day, time,
location, sessionBlock, classAge)
VALUES ("B1-497", "Adam", "Mon", 15:30, "Grange","Autumn",
"Babies");
```

Tim Roberts, who made booking TR238270, would like to book their child Lucas onto this new class. He has not yet paid for the class.

Write an SQL statement that will add this booking to the `Booking` table, using the bookingID TR653726. **2**

**15. (continued)**

**MARKS** DO NOT WRITE IN THIS MARGIN

(c) Some data needs to be removed from this table.

| Class | | | | | | |
|---|---|---|---|---|---|---|
| **classID** | **leaderName** | **day** | **time** | **location** | **sessionBlock** | **classAge** |
| S1-141 | Suzanne | Mon | 10:45 | Grange | Summer | 1-2 Years |
| S2-228 | Claire | Tue | 11:50 | Lothianburn | Autumn | 3-4 Years |
| S2-871 | Jo | Mon | 13:00 | Gorebridge | Spring | 3-4 Years |
| B1-121 | David | Thur | 15:30 | Biggar | Winter | Babies |
| S1-333 | Alexander | Wed | 13:00 | Coldingham | Summer | 1-2 Years |
| S2-519 | Claire | Fri | 10:45 | Lothianburn | Autumn | 3-4 Years |
| B3-435 | Jose | Wed | 09:30 | Gorebridge | Spring | Babies |
| ... | ... | ... | ... | ... | ... | ... |

(i) Claire is no longer able to run the 3-4 Years class on a Tuesday in the Autumn block.

The SQL statement below is written to make the change.

```
DELETE FROM Class
WHERE leaderName = "Claire"
AND classAge = "3-4 Years";
```

Give one reason why this SQL statement is not fit for purpose. **1**

(ii) The Gorebridge classes are no longer running.

Write the SQL statement to remove all the Gorebridge classes. **2**
