

13. The HTML code and JavaScript function below changes the colour of text when the mouse moves over it.

```
<script>
    function displayRed(my_text)
    {my_text.style.color='red';}
</script>
```

```
<p onmouseover="displayRed(this)">Sale now on</p>
```

- (a) Write an additional JavaScript function to change the colour of Sale now on to black.

1

- (b) Re-write the paragraph element to include a call to your function from part (a), so that the text can also be changed to black when the mouse moves away.

2
