

16. Pranav runs an escape room company that uses a website to promote the different themed escape rooms.

(a) Part of the information page of the company's website is shown below.

The image is too close to the top left of the section element.

The layout should be as below. The gaps above and to the left of the image are 10 pixels. The gap to the right is 20 pixels.

Complete the appropriate CSS rule for this image.

2

```
.eventimage {
```

[Turn over

\* S 8 1 6 7 6 0 1 3 1 \*

16. (continued)

Pranav wants to add a new web page with a form where customers can contact his company to enquire about bookings.

Customers are required to enter a contact name, email address, date of booking and the party size (max of 6).

Customers will have to choose a theme from Amazon Escape, Mayan Mayhem or Aztec Anarchy. They can also provide any additional information.

(b) Draw a suitable wireframe for this form which indicates validation.

4

\* S 8 1 6 7 6 0 1 3 2 \*

## 16. (continued)

- (c) The wireframe is then used to create a low-fidelity prototype.

Describe one benefit for the developer and one benefit for the client of using this low-fidelity prototype.

Developer benefit \_\_\_\_\_

\_\_\_\_\_

Client benefit \_\_\_\_\_

\_\_\_\_\_

- (d) The navigation bar for the website is as shown below.

- (i) This version of the navigation bar used the code below.

```
nav {height:35px; background-color: darkgrey}
nav ul li {float:left;width:150px;text-align:center;}
nav ul li a {display:block; padding:8px;}
```

Complete the CSS rule to remove the bullet points from the navigation bar.

1

nav ul { \_\_\_\_\_ }

- (ii) Explain why the unordered list in the navigation bar will display differently from any other unordered list in the website.
