

14. Some CSS properties for a website are implemented as follows.

```
header {margin-right:10px; margin-left:10px;}  
nav {margin-right:10px; margin-left:10px;}  
#event {width:700px; margin-left:10px;}  
#gaminglogo {width:75px; height: 75px; float:right; margin-  
right: 20px;}  
#eventlogo {float:right; width:75px; height:75px;  
margin-right:20px;}  
#floorplan {margin-left:10px; width:700px;}  
footer {margin-left:10px; margin-right:10px;}
```

Using grouping selectors to remove any repetition, re-write the code to make it more efficient.
