

14. A database is used to store data about restaurants. This includes the type of food they serve, the average price of a meal and a rating of 1, 2, 3, 4 or 5 stars.

- (a) The SQL query below is executed.

```
SELECT name, address, phoneNumber  
FROM restaurant  
WHERE (foodType = "Italian" OR foodType = "French")  
AND starRating > 1  
AND starRating < 5  
ORDER BY averagePrice ASC
```

Describe the output that would be listed under the headings name, address and phoneNumber when the above query is executed.

3

- (b) State which SQL operation would be required to change the phone number of a restaurant in the database.
