

7.	(a)	<p>Design showing:</p> <ul style="list-style-type: none"><li>• conditional loop</li><li>• loop condition</li><li>• input inside loop</li><li>• error message.</li></ul>	4	<p>The loop conditional may change depending on where the candidate uses a pre or post conditional loop. For example:</p> <ul style="list-style-type: none"><li>• until num = 1 or num = 5</li><li>• while num ≠ 1 and num ≠ 5</li></ul> <p>Where the design indicates a pre-conditional (while) loop a second input should be shown inside the loop</p>
