9. A relational database is used to store data about the products that a shop sells. The database has the following tables.

Product	Category	Courier	Manufacturer
productID	categoryName	courierID	manufacturerName
name	categoryDescrip	courierName	manufacturerAddress
description	currentDiscount	courierAddress	manufacturerTelNo
price		courierTelNo	courierID*
categoryName*			
manufacturerName*			

Draw an entity-relationship diagram to show the relationships that exist in this database.

Your answer should show the entity names and cardinality.

Attributes are not required on the diagram.
